

Group 3  
Bulko

### **Contributions:**

Chineye

- Merged files & resolved conflict errors
- Single Post Display Page
- Comments on Single Post Page

Ira

- Single Post Form Page
- Page to scroll through multiple photos in a single post, to be used for collections (worked on this together with Megan)
- Feed Page for users to scroll through their curated content (worked on this together with Megan)

Marissa

- Login / Registration page
  - Integrated firebase authentication
- User profile
- Set up core data to save information from registration and settings updates
- Set up tab bar navigation for the application flow

Megan

- Settings page/Edit Settings page
- Feed page (worked on this together with Ira)
  - Users can scroll through content from who they follow
- Page to scroll through multiple photos in a single post (worked on this together with Ira)

### **Deviations:**

- Feed currently uses preset data and images that we added in the Assets folder, we still have to link the post information up to Firebase; need to improve the layout constraints
- For Settings page, need to figure out the implementation for allowing users to change their profile pictures
- The user profile does not have any pictures or a collection view for the images, but just a basic layout
- Single post display needs to fetch data from Firebase based on postID instead of hard code
- Single post page needs review section and a switch the view comments or reviews, now just displays comments
